Table.cpp

This program will be made using a combination of "\t", "\n" and "<<endl". Create a program that has the same printout as below:

```
                      Table 1-1

   Employee              Salary($)              Age
   Jay Butler            41,100                 26
   Ray Johnson           61,000                 25
   Rex Trapper           70,000                 46
   Ilene Over            100,000                34

Press any key to continue . . . _
```
