Canon-McMillan Computer Science Club

2015-2016 – Session 5

Problem: Character Counter

Difficulty: Easy

Create a program that accepts an input sentence as well a target string to search for. The program prints the amount of times that the target string occurs within the input sentence.

Sample Printout)

```
Enter a start string: The house is blue
What would you like to search for: e

e occurs 3 times.
```
